SPEEDRY PROVIDES THE MOST EFFICIENT PROPERTY DRYING SYSTEM AVAILABLE.

EACH DRYING TRAILER CAN DO THE WORK OF UP TO 50 DEHUMIDIFIERS AND IS POWERED FROM ONE 13 AMP OR 110 VOLT SOCKET.

SPEEDRY ENSURES FASTER DRYING TIMES COMPARED TO TRADITIONAL DRYING METHODS.

TESTED BY INDUSTRY EXPERTS TO BE ALMOST 90% FASTER THAN DEHUMIDIFIERS

WITH LESS OR OFTEN NO RIPPING OUT OF YOUR STRUCTURAL COMPONENTS.

DUST AND MESS KEPT TO AN ABSOLUTE MINIMUM - USING DEHUMIDIFIERS CAN OFTEN MEAN HAVING TO HACK OFF PLASTERS AND UNDERTAKE STRUCTURAL RIPOUT.

FRESH WARM CONDITIONED AIR IN CONTINUALLY NOT DIRTY WET AIR RECIRCULATED.

DEHUMIDIFIERS CIRCULATE AIR FROM THE AREA BEING DRIED - OVER AND OVER. SPEEDRY CONTINUALLY EXCHANGES THE WET DAMP SMELLY AIR FROM WITHIN THE PROPERTY BEING DRIED WITH OUTSIDE AIR THAT HAS BEEN CONDITIONED TO ENSURE IT IS CLEAN, WARM AND DRY.

THEREFORE LESS MESS, STRESS, INCONVENIENCE AND OVERALL COST SAVINGS.

PLEASE REQUEST OUR BROCHURE WHICH UNDERTAKES DIRECT COMPARISONS WITH DEHUMIDIFIER DRYING IN SIMILARLY DAMAGED, ADJOINING OR CONVERTED PROPERTIES.

GUARANTEED WORKS.

INDUSTRY LEADING MONITORING PROVIDING CERTIFICATES OF DRYING.

EXPERIENCED TRAINED FLOOD TECHNICIANS WHO PUT YOU FIRST.

FULL STRUCTURAL AND ENVIRONMENTAL MONITORING SETS THE INDUSTRY DRYING STANDARD. BACKED UP BY A CERTIFICATE OF DRYING COMPLYING WITH THE GUIDELINES SET IN BRITISH STANDARDS PAS 64, 8201 and 8203.

WHERE REQUIRED, A HIGH STANDARD OF DECONTAMINATION BY ACTION DRY TECHNICIANS. VALIDATED BY A CERTIFICATE OF HYGIENE.

PROFESSIONAL TRAINED TECHNICIANS FULLY CONVERSANT WITH YOUR DAMAGE AND PROPERTY TYPE WILL ENSURE THAT THE PROPERTY HAS BEEN REINSTATED TO AT LEAST PRE INCIDENT CONDITION.

THE FUTURE OF DRYING FROM ACTION DRY LTD

DOMESTIC

COMMERCIAL

UNTIL RECENTLY THE WAY TO DRY OUT A FLOOD DAMAGED PROPERTY WAS TO USE TRADITIONAL DEHUMIDIFIERS WHOSE BASIC TECHNOLOGY WAS DEVELOPED NEARLY 70 YEARS AGO. DEHUMIDIFIER DRYING MAY BE CHEAP AND SUFFICIENT FOR SMALL FLOODS WHERE TIME AND POWER SUPPLY IS NOT AN ISSUE BUT BY USING THEM ON MORE SERIOUS FLOODING YOU WILL USUALLY BE FACED WITH LENGTHY DRYING TIMES AS WELL AS HAVING TO HACK OFF PLASTER OR RIP OUT - ADD THAT TO ANY ALTERNATIVE ACCOMMODATION OR BUSINESS INTERRUPTION PAYOUTS AND COSTS SKYROCKET.

BY USING "SPEEDRY" DRYING SYSTEMS....

STRIP OUT COSTS WILL BE REDUCED OR AVOIDED.

REFURBISHMENT COSTS ARE THEREFORE MINIMIZED.

TIME CAN BE SAVED! RESULTING IN LESS PAYOUT FOR BUSINESS INTERRUPTION OR ALTERNATIVE ACCOMMODATION.

Our drying costs are more than recouped from overall savings made!

HOW DOES THE SPEEDRY WORK? WELL IN A NUTSHELL, OUTSIDE AIR FILTERED TO REMOVE POLLUTANTS IS CONDITIONED IN THE SYSTEM TO REDUCE RELATIVE HUMIDITY TO AS LOW AS 2%. (A desert is wetter at around 10% RH). THE CONDITIONED AIR IS HEATED TO BETWEEN 80c - 120c AND INTRODUCED INTO THE TARGET AREA IN LARGE ENOUGH VOLUMES TO CREATE A RAPID AND IDEAL DRYING ENVIRONMENT. THIS WARMS THE WALLS AND FLOORS RESULTING IN FASTER EVAPORATION OF WATER FROM THEM INTO THE DRIER ENVIRONMENT BEING PRODUCED BY THE SYSTEM. AN EXTRACTION DUCT, BALANCED WITH THE SUPPLY DUCT CONTINUALLY REMOVES THE RESULTANT SATURATED AIR WITH ITS ODOURS AND AIRBOURNE POLLUTANTS LEAVING A DRY ODOUR FREE PROPERTY IN JUST DAYS.

- THE MOST EFFICIENT DRYING SYSTEM IN USE
- WORKS FROM ONE 240V OR 110V POWER SOCKET
- DOES THE WORK OF UP TO 50 DEHUMS, 90% FASTER
- POTENTIAL FOR MOULD GROWTH REMOVED
- USES CLEAN FRESH AIR FROM OUTSIDE
- DRYING TIMES MINIMISED, REDUCES CLAIM COST

- REDUCES NEED FOR RIP OUT
- PROFESSIONAL AND DILIGENT
- EXPERTLY MONITORED
- DOMESTIC AND COMMERCIAL WORKS UNDERTAKEN
- WILL DRY EFFICIENTLY ANY WEATHER
- EXTREMELY COST EFFECTIVE

HISTORIC

Same building, different drying methods

The picture on the left shows how its usually done with dehumidifiers. The picture to the right shows how it can be done with the SPEEDRY.

THE BENEFITS? DRYING COMPLETED UP TO TEN TIMES FASTER THAN DEHUMIDIFIERS WITH LESS MESS, LESS REFURBISHMENT COSTS AND LESS ALTERNATIVE ACCOMMODATION OR BUSINESS INTERRUPTION PAYOUT.
